

San Francisco

Creativity comforts

The ultraergonomic workstations from Berkeley architect Michael Goldin's company, **Swerve**, start at \$1,100, but they'll last until long after you win that Pulitzer. (Also, if you skimp on your setup, your writing career might be over before it starts—as many an author from the days before ergo evaluations will attest.) Goldin's designs can be configured for each user, making them popular among heavy hitters, like the Google and Electronic Arts executives who recently built their home offices with Swerve. Stop by the company's showroom to check out the customizable T6 system, with its infinitely adjustable joints, and assemble your ideal writing space one component at a time. All workstations are made of aircraft-grade aluminum, bamboo, and other earth-friendly materials.
